Cosmetic material, having good wet and smooth use feeling with out stickiness - contg. one or more polyethylene glycol of specified mol.wt.

Cosmetic material contains one or more polyethylene glycols of a mol. wt. 500000-5000000. The blend ratio of the polyethylene glycols is e.g. 0.1-5 (0.01-2) wt.%. The material may contain one or a mixt. of oils, moisture-retaining ingredients, surfactants, water-soluble polymers, preservatives, chelating agents, drugs, perfumes, antioxidants, powders and water.

USE - The material has a good wet and smooth use feel without stickiness and high cosmetic durability. (8pp)

Skin cosmetic material imparting good smooth touch and wetness contains one or mixt. of high molecular silicone(s) and one or more polyethylene glycol(s)

A new skin cosmetic material contains one or a mixt. of high molecular silicones of formula (I) and one or more polyethylene glycols of a mol. wt. of 500,000 - 5,000,000.

R_1 = independently methyl or phenyl;

R_2 = methyl or hydroxyl and;

n = 500-20,000.

USE/ADVANTAGE

The material imparts smooth touch and good wetness

without stickiness.

DETAILS

The silicones include dimethyl polysiloxanes; methyl phenyl polysiloxanes, end-hydroxyl-contg. dimethyl polysiloxanes and end-hydroxyl-contg. methyl phenyl polysiloxanes. The content of the silicone is usually 0.1-10 (pref. 0.1-5) wt.%. The silicone is usually

The silicone is pref. blended by dissolving in a lower oil ingredient, such as a chain or cyclic silicone or a low-boiling isoparaffin hydrocarbon.

The polyethylene content is usually 0.01-5 (pref. 0.01-2) wt.%. The material may be a solubilised system, emulsion, a powder dispersion system or an oil-water two-layer system. (7pp)

Emulsion compsn. having high stability at high and low temps. contains alcohol(s) and opt. surfactants, antioxidants and disinfectants, etc.

Compsn. contains 0.1-30 wt.% of two types of at least 18C alcohols in a blend ratio of 1:8 - 8:1. The alcohols are e.g. at least two of stearyl, arachyl, behenyl, carnaubyl, ceryl and chimyl alcohol. The compsn. may contain at least one of surfactants, antioxidants, disinfectants, antibacterial agents, UV-absorbing agents, moisture-retaining agents, oil ingredients, chelating agents, pigments, perfumes and dyes.

ADVANTAGE - The compsn. has high stability at low and high temps.. (6pp)
